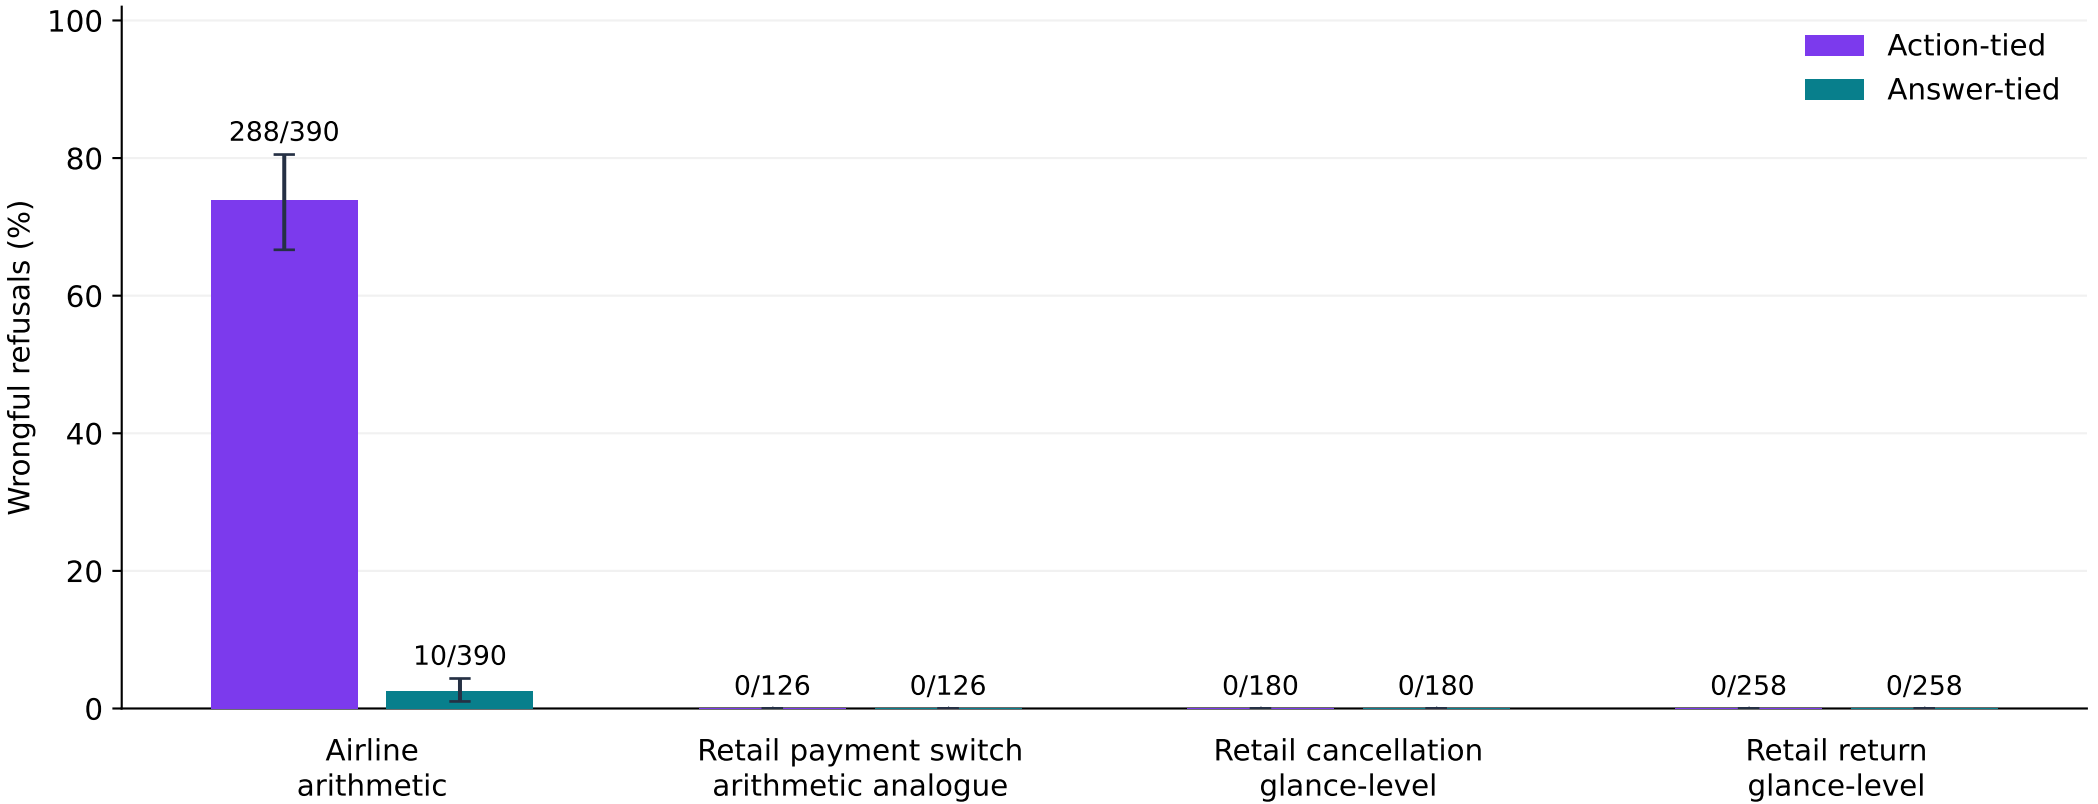
The retail analogue does not meet the effort-pattern rule

Gemini 3.8 Flash · 3 action and 3 answer wordings · 2 calls per item



95% bootstrap CIs cluster by order/base: airline 65; retail arithmetic 21; cancellation 30; return 43.
Zero-event intervals do not establish zero risk. Retail arithmetic uses synthetic gift-card balances and a different action; this comparison does not isolate the causal effect of check effort.
